Source – Agriculture – Farming and its types

Cooperative Farming is a new trend in farming. The mode of operation is simple. Farmer's take loan from cooperative banks and invest the amount in farming. Land is tilled collectively by the farmers. Maximum utilization of modern machinery is done in such type of farms. Products are not directly launched in the market, they are made available through a cooperative shop or a retail sale outlet. Co-operative farming is commonly practised in the countries like Sweden, Belgium, Norway and Denmark.

- (a) How do farmers arrange the finances in cooperative farming?
(b) How do farmers sell their products in cooperative farming?
(c) Which countries practise cooperative farming in the world?

Section-C Long Answer Type Questions

- Q.11. What is subsistence farming? Discuss the types of subsistence farming.
Q.12. Give a brief account of geographical factors necessary for jute cultivation. Also mention the name of the jute producing areas in India and the world.
